Activity 1.3 – Git

1. Install Git

On the Set Up web page, follow the instructions under "Get Started with Git".

2. Launch Jupyter

Close your terminal window. Close the Jupyter tab or window of your web browser?

Open a *new* terminal window. Enter `cd ReadingJournal`. Enter `jupyter notebook`.

You should see the Reading Journal in your web browser. The journal is a Jupyter notebook, like the one that you created in the previous activity.

You can use remaining class time, if any, to begin work on the journal.

3. For Next Time

Do the reading, and work on the reading journal. When you are done, follow the instructions on the course web site to submit the journal.

There is more homework for next week than just the reading journal! You also need to join Slack, and fill out the survey.

The course site is the ultimate authority on what's due. (And, if it's not clear, ask on Slack.)

Going Beyond: Explore Git

Later in the course, we will make more extensive use of GitHub and git. If you want to explore earlier, here is a nice tutorial: https://try.github.io/.
